■ W-CSD ADJUSTMENT

1. Timer Stroke Adjustment (adjust to the thick line)

- 1) Calculate the timer stroke from Fig. 5 according to the atmospheric temperature at the time of adjustment.
- 2) Adjust using the timer stroke adjusting screw so that the timer stroke is as calculated in Fig. 5 (diagram).

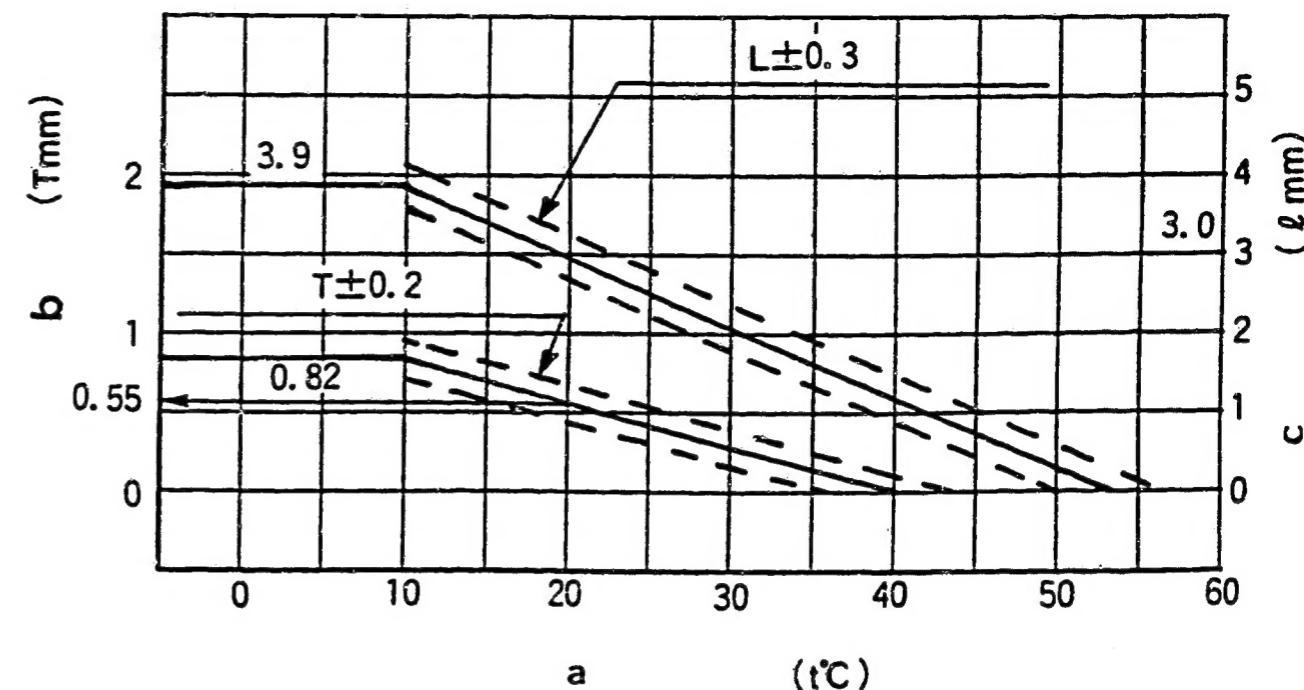

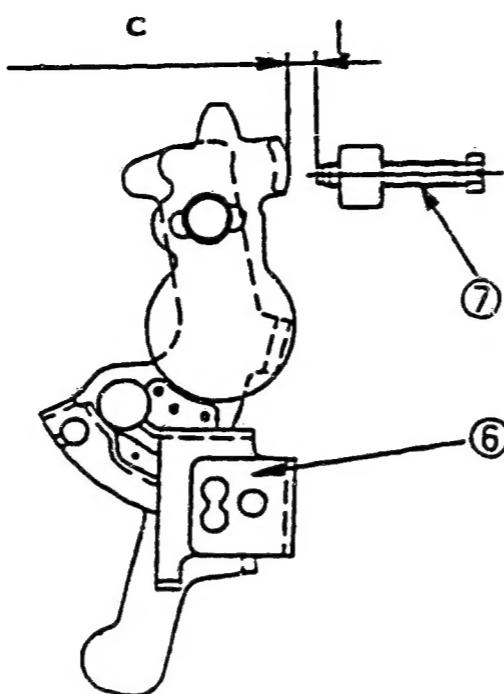

Figure 5

104740-2184 2/4

a = Atmospheric temperature
b = Timer stroke
c = Gap between control lever and idling stopper bolt

(Continued)

2. Intermediate Lever Position Adjustment

- 1) Insert a block gauge (thickness gauge) of 3.0 ± 0.05 mm thickness between the control lever and the idling stopper bolt.
- 2) Insert a block gauge (thickness gauge) of 5.3 ± 0.05 mm thickness between the intermediate lever and the intermediate lever bracket.
- 3) Align the intermediate lever with the aligning mark.
- 4) Adjust the intermediate lever set screw so that the control lever and the intermediate lever set screw are in contact, and then fix in position using the locknut.

3. CSD Lever Adjustment (adjust to the thick line)

- 1) Calculate the block gauge dimension $l \pm 0.05$ mm from (Fig. 5) according to the atmospheric temperature at the time of adjustment.
- 2) Insert the block gauge (thickness gauge) between the control lever and the idling stopper bolt.
- 3) Using the idling bolt, adjust so that the CSD lever roller and the intermediate lever are in contact.

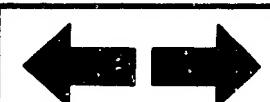

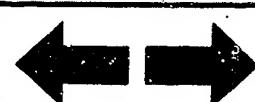

4. Final Adjustment

After completing the adjustment, screw the timer stroke adjusting screw two turns clockwise.
(Move from the temporary adjustment chart to the final adjustment chart).

Note:

1. The temperature of the wax must be below 30°C when adjusting.
2. When inserting a block gauge (thickness gauge) between the control lever (bracket) and the idling stopper bolt, use the idling adjusting bolt to separate the CSD lever and the intermediate lever so that no excessive force is exerted on them.

θ (°C) ≤ 10	TA = 0.82	θ (°C) ≤ 10	L = 3.9
10 ≤ θ (°C) ≤ 20	TA = -0.027 $\theta + 1.09$	10 ≤ θ (°C) ≤ 30	L = -0.09 $\theta + 4.8$
20 ≤ θ (°C) ≤ 40	TA = -0.0275 $\theta + 1.1$	30 ≤ θ (°C) ≤ 54.3	L = -0.086 $\theta + 4.68$

- 1 = Idling stopper bolt
- 2 = Dashpot
- 3 = Dashpot adjusting screw
- 4 = Bracket
- 5 = Block gauge
- 6 = Control lever

■ DASH POT ADJUSTMENT

1. Insert a block gauge (thickness gauge) of thickness 6.0 ± 0.05 mm in the gap between the bracket and the idling stopper bolt.

(Continued)

2. With the control lever positioned as described in point 1., adjust the dashpot adjusting screw so that the dashpot adjusting screw and the push rod are in contact.

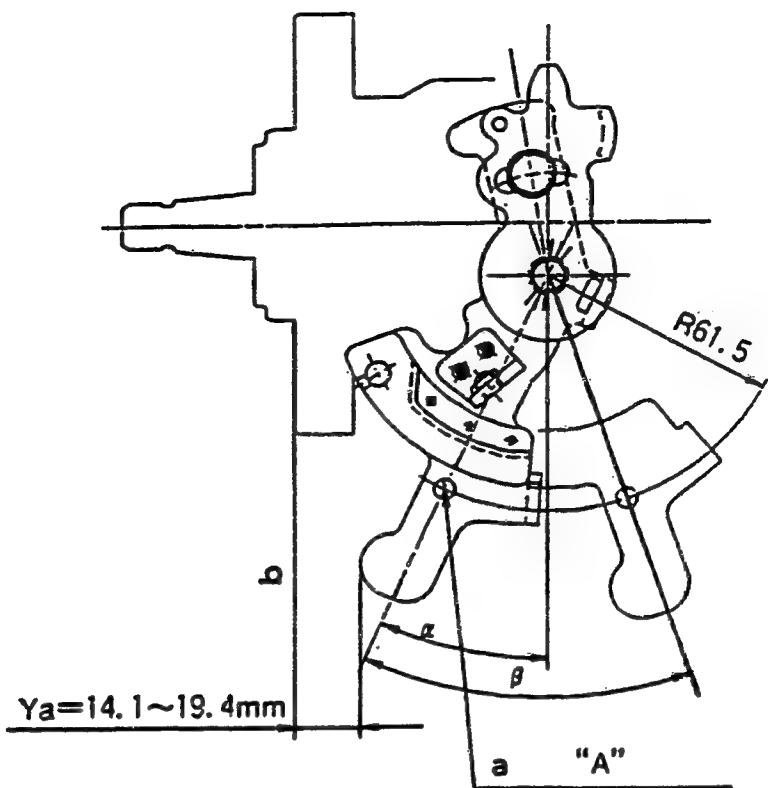

Fix the screw using the nut.

3. Adjust the dash pot mounting position so that the dash pot of the tip and the control lever are in contact. Fix the dash pot using the nut.

Caution:

- The adjusting screw and the pushrod must move together smoothly.
- Confirm that the control lever returns to the idling position.

104740-2184 4/4

104740-2224 4/6

■ DASH POT ADJUSTMENT

1. Insert a block gauge (thickness gauge) of thickness 6.0 ± 0.05 mm in the gap between the control lever and the idling stopper bolt.
2. With the control lever positioned as described in point 1. above, adjust the dashpot adjusting screw so that the dashpot adjusting screw and the push rod are in contact.
Fix the screw using the nut.

Caution:

- The adjusting screw and the pushrod must move together smoothly.
- Confirm that the control lever returns to the idling position.

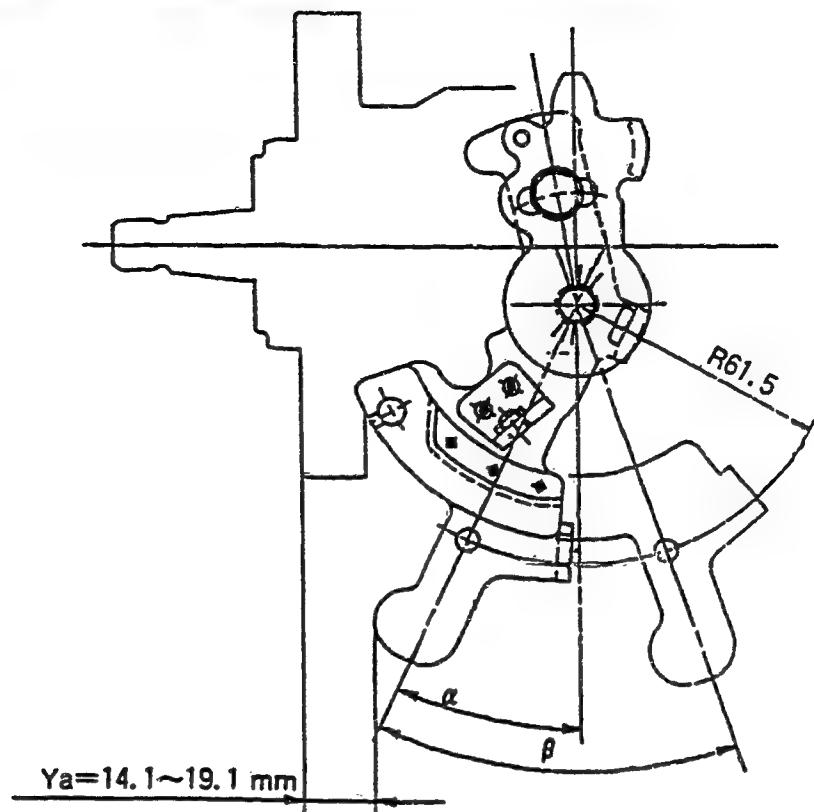

Figure 15

104740-2224 5/6

■ CONTROL LEVER ANGLE MEASUREMENT POSITION

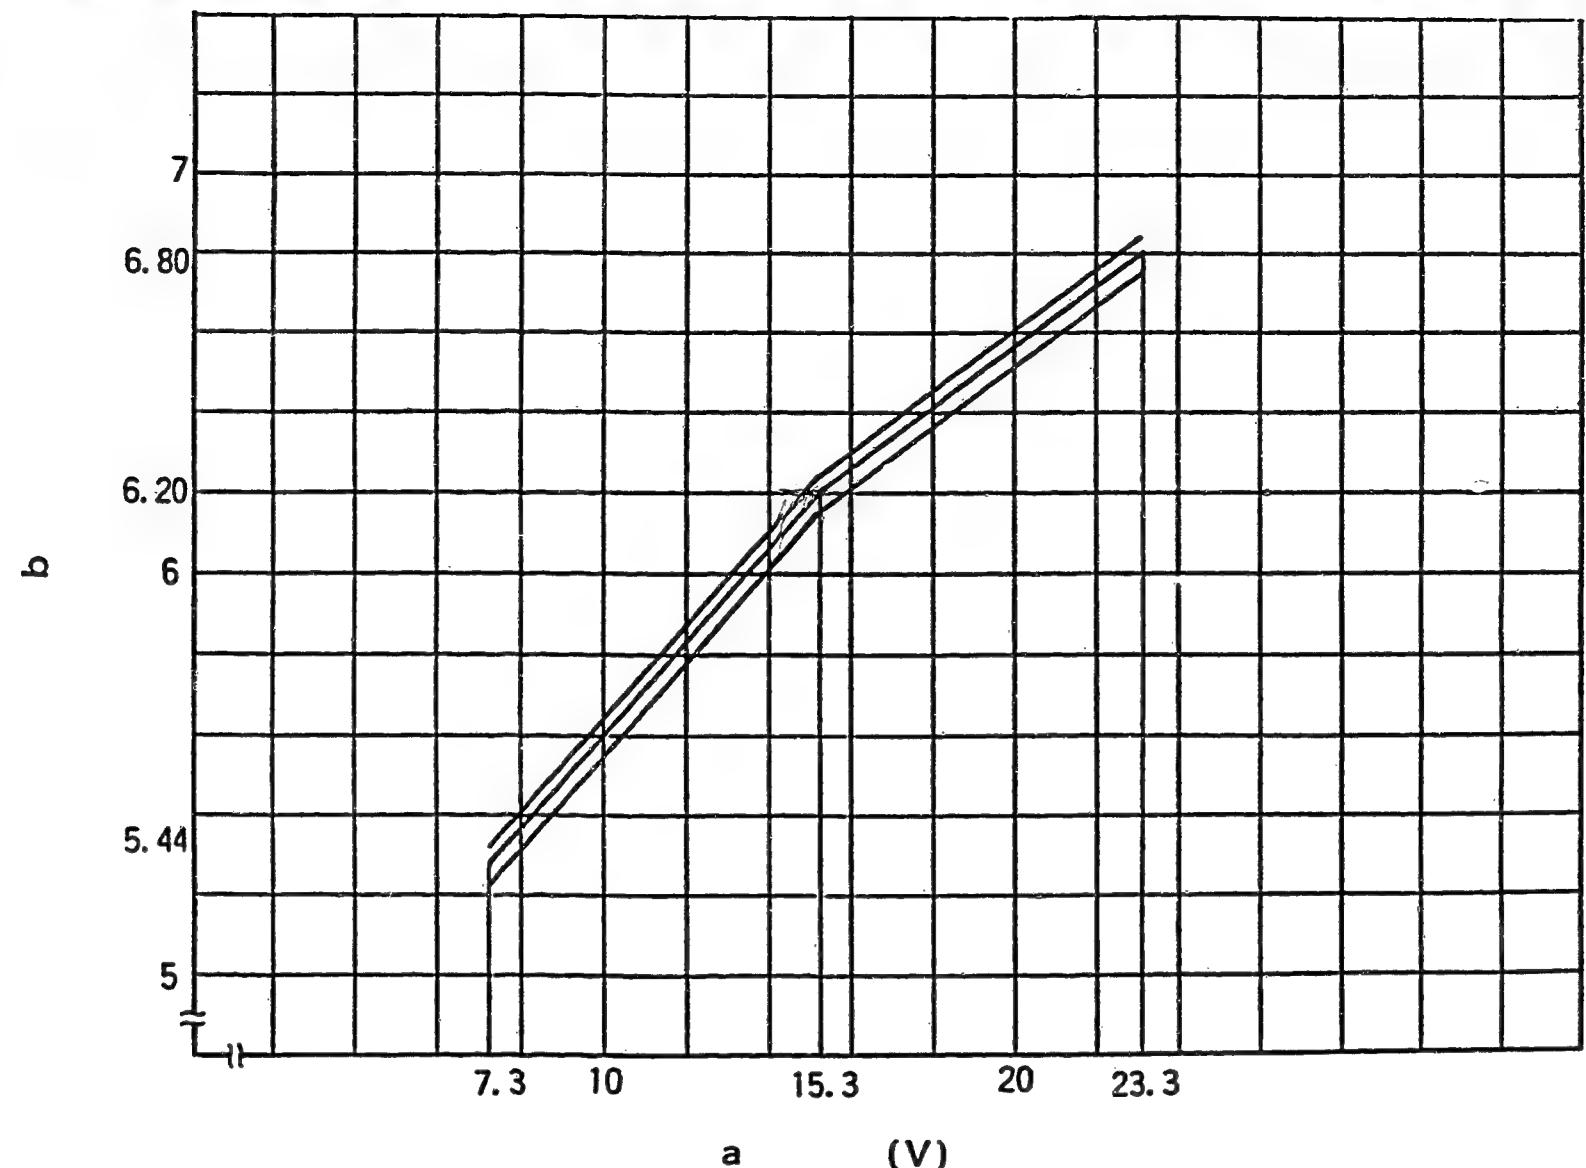

Figure 16

104740-2224 6/6

a = Out-put voltage

b = Fuel injection quantity ($\text{cm}^3/1000\text{st}$)

■ POTENTIOMETER ADJUSTMENT

$$\text{Fuel injection quantity } Q < 14.2 \text{ cm}^3/1000\text{st} \rightarrow V \pm 0.03 = 0.0978 Q + 4.7259$$

$$\text{Fuel injection quantity } Q \geq 14.2 \text{ cm}^3/1000\text{st} \rightarrow V \pm 0.03 = 0.0752 Q + 5.0457$$

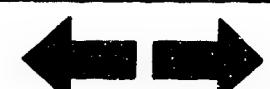

Under the following conditions, alter the potentiometer's installation position so that the out-put voltage equals the specified value.

Adjustment Conditions			Specified Value	Remarks
Control lever position	Pump speed (rpm)	Fuel injection quantity (cc/1000st)	Out-put voltage (V)	
Approx. 16.1°	1200	Measure	Measure	Adjust. point
Idle	-	-	-	Check point
Full speed	-	-	-	Check point

(In-put voltage: 10V)

* A control lever position of approx. 16.1° means that a block gauge of 10.3 mm thickness is inserted between the control lever and the idling stopper bolt.

ZEXEL - Test values

Injection pumps

1. Adjustment

1) Fix the control lever in the position satisfying the following conditions:

Boost Pressure: 540 - 560 mmHg
 Pump Speed : 1250 rpm
 Fuel Injection Quantity: 49.5 - 50.5 cc/1000st

2) With the control lever positioned as described in 1) above, adjust the governor sleeve so that the Timer Stroke conforms to the specified values (page 1/3).

2. Confirmation of Timer Characteristics

Fix the control lever in the position satisfying the following conditions, and confirm the Timer Stroke.

Control lever position			Specified values	
Pump speed (rpm)	Fuel injection quantity (cc/1000st)	Boost pressure (mmHg)	Timer stroke (mm)	Timer stroke reduction value (mm)
1250	49.0 - 51.0	540 - 560	-	0.3 - 0.9
1250	38.5 - 41.5	540 - 560	-	0.9 - 1.9

■ FICD MOUNTING POSITION ADJUSTMENT

1. Hold the control lever in the idling position.
2. Position the FICD mounting bracket so that the gap between the control lever and the FICD lever is $1^{\pm 1}$ mm.

POTENTIOMETER ADJUSTMENT SPECIFICATIONS

Pump speed (rpm)	Out-put voltage (V)	Injection quantity mm ³ /st	Remarks
750	2.49 ± 0.03	8.7 ± 1 Boost = 600 mmHg	Adjustment point
385	0.96 ± 0.4	8.1 ± 2 (Idle)	Confirmation point

(In-put voltage: 10V)

1. At a pump speed of 750 rpm, hold the control lever in a position where a fuel injection quantity of 7.7 - 9.7 mm³/st can be obtained.
2. Screw in the adjusting screw until it contacts the control lever and fix it using the locknut.
3. Adjust the potentiometer so that the out-put voltage is 2.46 - 2.52 V.

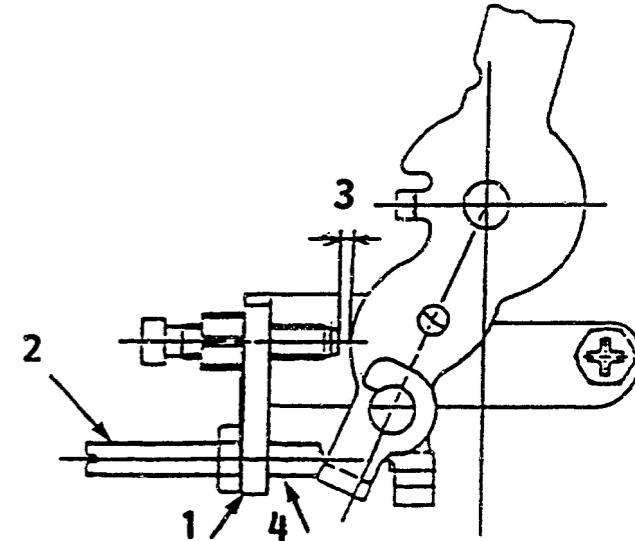

Fig. 17

- 1 = Adjusting screw installation bracket
 2 = Adjusting screw
 3 = Shim (thickness)
 4 = Adjusting screw and locknut

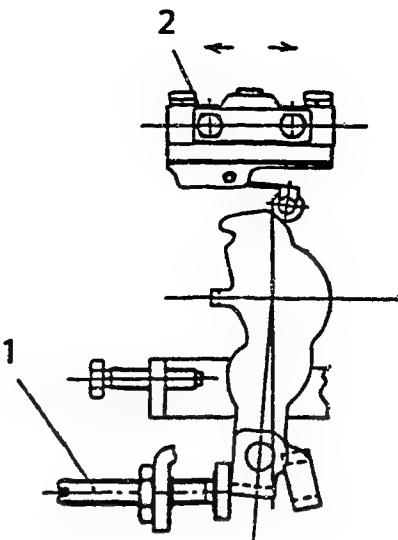

Injection quantity specifications (Boost pressure = 600 mmHg)		Microswitch adjustment specifications	
Speed (rpm)	Injection quantity (mm ³ /st)	Microswitch operation	Potentiometer output (V)
1000	50.6 ± 3.5	ON → OFF	4.56 ± 0.05

1. Fix the adjusting screw used to adjust the potentiometer so that potentiometer output voltage is 4.56 V.
2. Move the microswitch in the direction of the arrow from the ON position to the OFF position, and fix it in this position.
3. Loosen the adjusting screw and confirm that potentiometer output voltage is 4.56 ± 0.05V when the microswitch moves from ON to OFF.

Figure 18

1 = Adjusting screw
 2 = Microswitch fixing bolt
 $T = 0.2 - 0.3 \text{ kgm}$

- Attach the timer's measuring device to the low pressure side.
- Adjust the pump with the magnet valve OFF.
- V-FICD ADJUSTMENT

1. Adjust the bracket so that the clearance S is 1^{+1} mm.
2. Apply 400 mmHg negative pressure to the inside of the actuator and confirm that the actuator shaft moves the full stroke.

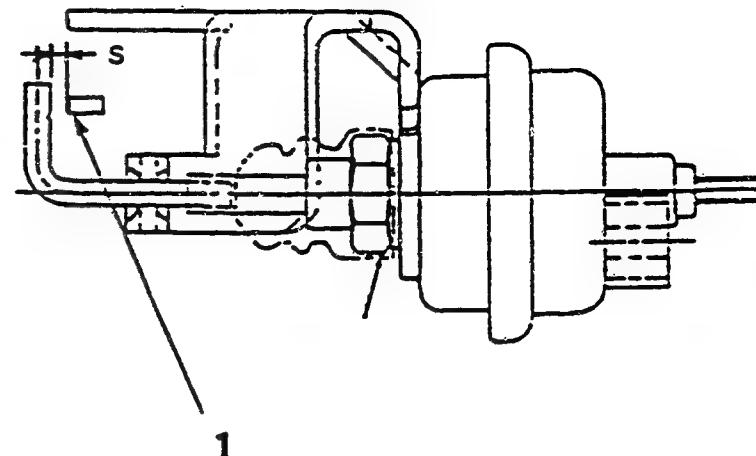

Figure 19

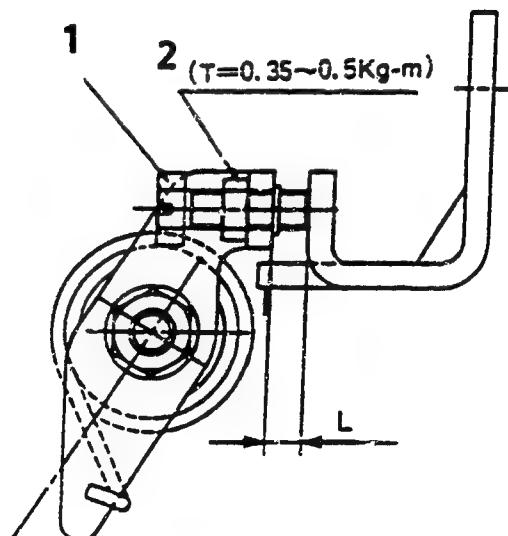

1 = Control lever (Idling position)

■ STARTING INJECTION QUANTITY ADJUSTMENT

Adjust the starting injection quantity (page 1/4) using the adjusting screw (as shown in the figure at right).

■ LOAD TIMER ADJUSTMENT

1. Adjustment

1) Fix the control lever in the position satisfying the following conditions:

Boost Pressure: - mmHg
 Pump Speed : 1250 rpm
 Fuel Injection Quantity: 17.5 - 18.5 cc/1000st

2) With the control lever positioned as described in 1) above, adjust the governor sleeve so that the Timer Stroke conforms to the specified values (1 - 7).

2. Confirmation of Timer Characteristics

Fix the control lever in the position satisfying the following conditions, and confirm the Timer Stroke.

Control lever position			Specified values	
Pump speed (rpm)	Fuel injection quantity (cc/1000st)	Boost pressure (mmHg)	Timer stroke (mm)	Timer stroke reduction value (mm)
1250	17.0 - 19.0	-	-	0.5 - 1.1
1250	5.5 - 8.5	-	-	1.7 - 2.7

■ W-CSD ADJUSTMENT

1. Timer Stroke Adjustment (adjust to the thick line)

1) Calculate the timer stroke from Fig. 22 according to the atmospheric temperature at the time of adjustment.

C21

ZEXEL - Test values
Injection pumps

C22

ZEXEL - Test values
Injection pumps

(Continued)

2. Intermediate Lever Position Adjustment

- 1) Insert a block gauge (thickness gauge) of 1.2 ± 0.05 mm thickness between the control lever and the idling stopper bolt.
- 2) Align the intermediate lever with the aligning mark.
- 3) Adjust the intermediate lever set screw so that the control lever and the intermediate lever set screw are in contact, and then fix in position using the locknut.

C23

ZEXEL - Test values

Injection pumps

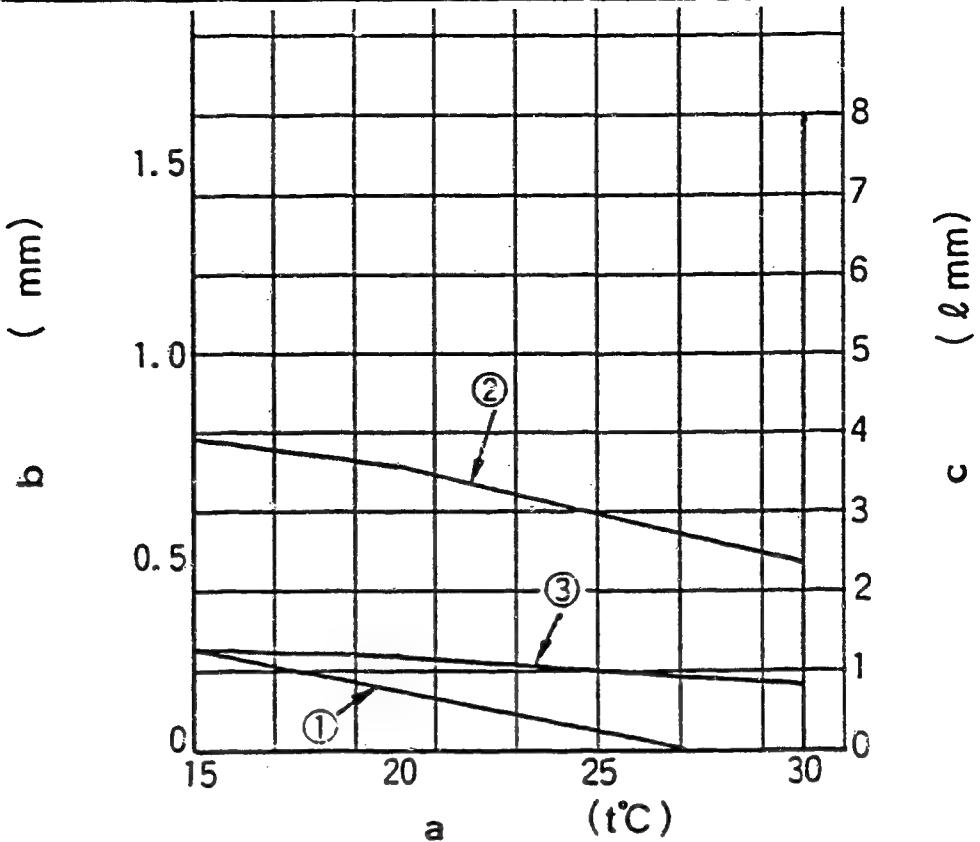

Figure 22

104748-1723 4/4

- a = Atmospheric temperature
- b = Timer stroke
- c = Gap between control lever
and idling stopper bolt

3. CSD Lever Adjustment (adjust to the thick line)

- 1) Calculate the block gauge dimension $l \pm 0.05$ mm from Fig. 22 according to the atmospheric temperature at the time of adjustment.
- 2) Insert the block gauge (thickness gauge) between the control lever and the idling stopper bolt.
- 3) Using the idling bolt, adjust so that the CSD lever rod and the intermediate lever pin are in contact.

(Continued)

Timer Stroke (mm):

$$TA = -0.0215 t + 0.585$$

Control Lever Angle (deg):

$$\Omega_1 = -0.0625 t + 4.85 \quad (-20^\circ\text{C} \leq t \leq 20^\circ\text{C})$$

$$\Omega = -0.12 t + 6.0 \quad (20^\circ\text{C} < t \leq 50^\circ\text{C})$$

Clearance between Control Lever and Idling Stopper Bolt (mm):

$$l_1 = -0.02075 t + 1.585 \quad (-20^\circ\text{C} \leq t \leq 20^\circ\text{C})$$

$$l_2 = 0.039 t + 1.95 \quad (20^\circ\text{C} < t \leq 50^\circ\text{C})$$

■ STARTING INJECTION QUANTITY ADJUSTMENT

Adjust the starting injection quantity (page 1/4) using the adjusting bolt (as shown in the figure at right).

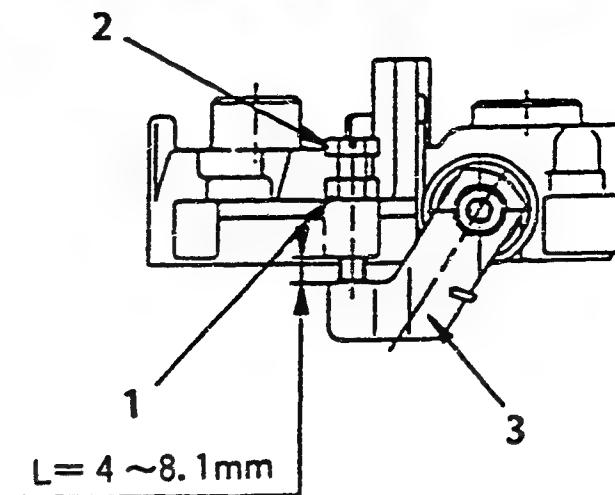

Figure 26

- 1 = Locknut
- 2 = Adjusting bolt
- 3 = Stop lever

■ LOAD TIMER ADJUSTMENT

1. Adjustment

- 1) Fix the control lever in the position satisfying the following conditions:

Boost Pressure:	-	mmHg
Pump Speed :	900	rpm
Fuel Injection Quantity:	8.0 - 10.0	cc/1000st

- 2) With the control lever positioned as described in 1) above, adjust the governor sleeve so that the Timer Stroke conforms to the specified values (page 1/4).

■ W-CSD ADJUSTMENT

1. Timer Stroke Adjustment (adjust to the thick line)

- 1) Calculate the timer stroke from Fig. 29 (diagram) according to the atmospheric temperature at the time of adjustment.
- 2) Adjust using the timer stroke adjusting screw (1) so that the timer stroke is as calculated in item 1.

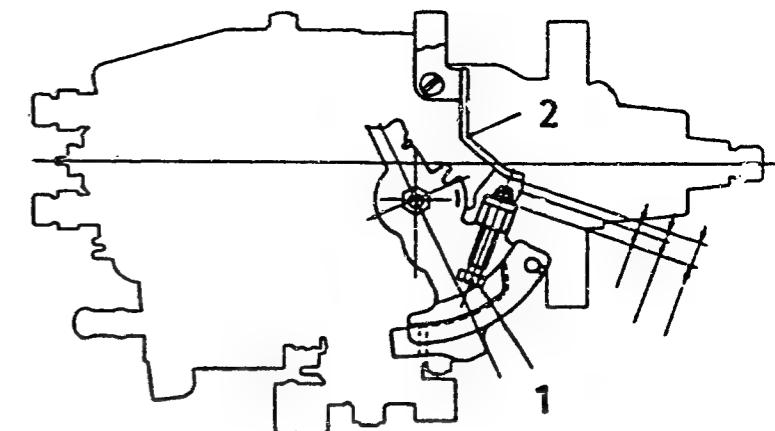

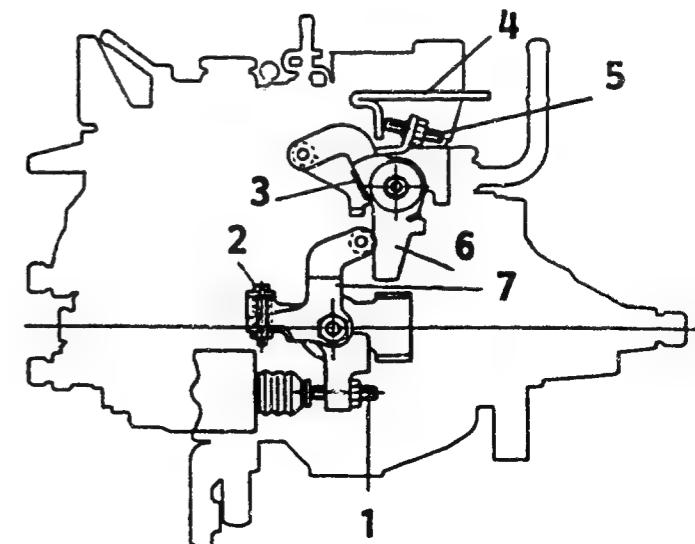

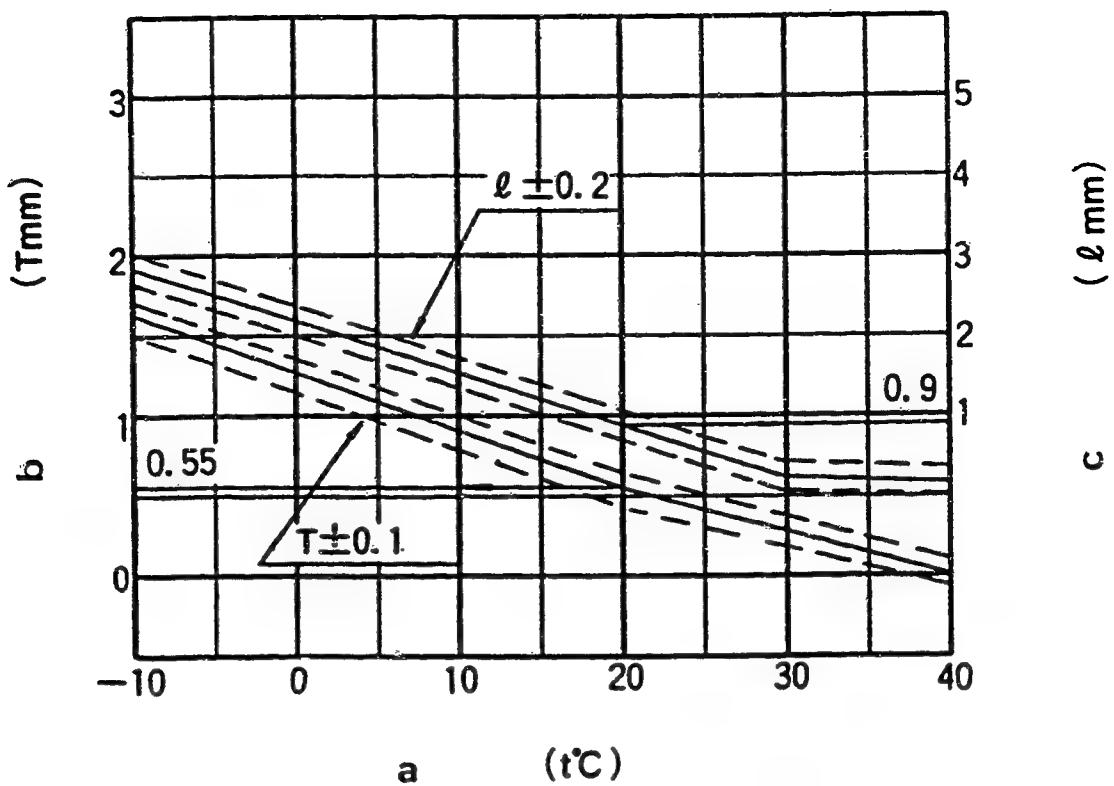

Figure 27

- 1 = Idling stopper bolt
2 = Braket

Figure 28

Figure 29

- a = Atmospheric temperature
- b = Timer stroke
- c = Gap between control lever
and idling stopper bolt

3. CSD Lever Adjustment (adjust to the thick line)

- 1) Calculate the block gauge dimension $l \pm 0.05$ mm from (Fig. 29) according to the atmospheric temperature at the time of adjustment.
- 2) Insert the block gauge (thickness gauge) between the control lever and the idling stopper bolt.
- 3) Using the idling bolt, adjust so that the CSD lever roller and the intermediate lever are in contact.

(Continued)

4. Final adjustment

After completing the adjustment, screw the timer stroke adjusting screw two turns clockwise.
(Move from the temporary adjustment chart to the final adjustment chart).

* This W-CSD's timer stroke operations are effective at atmospheric temperatures of 30°C or above. Therefore, to make adjustment at normal temperatures possible, after adjusting to the substitute characteristics, tighten the timer stroke adjusting screw two turns.

Note:

1. The temperature of the wax must be below 30°C when adjusting.

2. When inserting a block gauge (thickness gauge) between the control lever (bracket) and the idling stopper bolt, use the idling adjusting bolt to separate the CSD lever and the intermediate lever so that no excessive force is exerted on them.

$$-10 \leq \theta \text{ (}^{\circ}\text{C)} \leq 20 \quad TA = -0.0367 \theta + 1.284 \quad -10 \leq \theta \text{ (}^{\circ}\text{C)} \leq 20 \quad l = -0.0628 \theta + 2.1555$$

E4

ZEXEL - Test values
Injection pumps

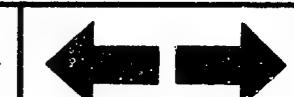

Under the following conditions, alter the potentiometer's installation position so that the out-put voltage equals the specified value.

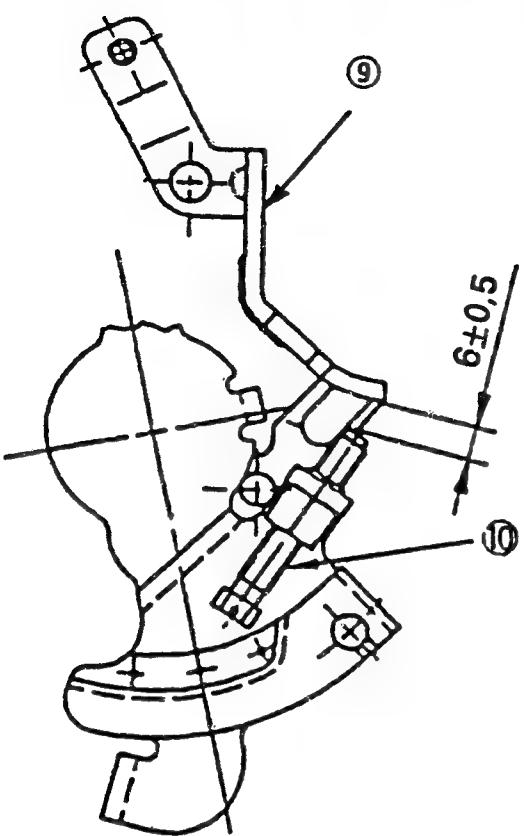

Adjustment Conditions			Specified Value	Remarks
Control lever position	Pump speed (rpm)	Fuel injection quantity (cc/1000st)	Out-put voltage (V)	
(Approx. 15.5°)	1200	Measure	Measure	Adjust. point
Idle	-	-	-	Check point
Full speed	-	-	-	Check point

(In-put voltage: 10V)

* A control lever position of approx. 15.5°, means that a block gauge of 8.4 mm thickness is inserted between the control lever and the idling stopper bolt.

$$V \pm 0.05 = 0.1115 Q + 2.7557 \text{ (V)}$$

9 = Idling set bracket

M-CSD ADJUSTMENT

1. CSD Adjustment

- 1) Hold the control lever (6) in the idling position.
- 2) Move the CSD lever (5) to the right until it contacts the stopper (4).
- 3) Then, adjust the position of the screw (2) so that the timer stroke is 1.6 ± 0.2 mm and fix the screw (2) using the nut.

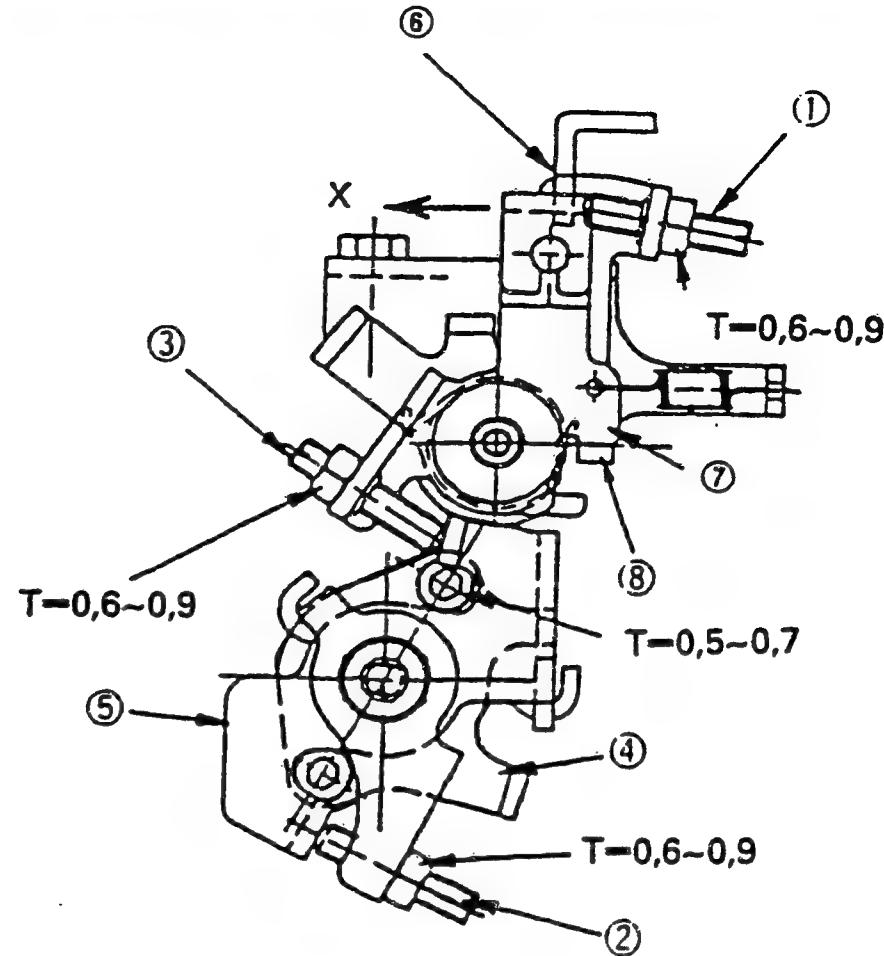

Fig. 31

104769-2162 3/4

(Continued)

2. Fixing the Intermediate Lever Adjustment Screw

- 1) Hold the CSD lever (5) in the position described in item 1 (timer stroke: 1.6 ± 0.2 mm).
- 2) Move the intermediate lever (7) toward "X" and confirm that it contacts the stopper (8).
- 3) Then, adjust the screw (3) so that the CSD lever (5) contacts the screw (3) and fix the screw (3) using the nut.
- 4) Return the intermediate lever (7) to its original position and confirm that the timer stroke is 0 mm.

3. Screw (1) Adjustment

- 1) Move the intermediate lever (7) toward "X" until it contacts the stopper (8).
- 2) Adjust the position of the screw (1) so that the gap between the idling set bracket (9) and screw (10) is 6 ± 0.5 mm, and fix screw (1) using the nut.
- 3) Then, confirm that the gap between the control lever (6) and screw (1) is approximately 1.7 mm.

1 = Idling stopper bolt
 2 = Dash pot
 3 = Dash pot adjusting screw

4 = Bracket
 5 = Block gauge
 6 = Control lever

■ DASH POT ADJUSTMENT

1. Insert a block gauge (thickness gauge) of thickness 3.8 ± 0.05 mm in the gap between the idling stopper bolt and the bracket.
2. With the control lever positioned as described in 1. above, adjust the dashpot adjusting screw so that the dashpot adjusting screw and the pushrod are in contact.
Fix the screw using the nut.
